Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Louise Lang

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Please reject Valero's dangerous plan! These trains have caused environmental spills and disasters all over the U.S., ruining water ways, drinking water, land, natural resources. Don't do it! This is a nice community in Martinez, that already has HUGE air pollution problems and an extremely high cancer rate as a result!

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Subject: Reject Valero's dangerous oil trains project

No new infrastructure for a practice that needs to be outlawed. Fracking is an insane attempt to poison our planet faster than ever for profit in the face of clean feul alternatives. Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I am asking the Planning Commission and the City Council to reject Valero's plan to build an oil trains facility in Benicia. Huge explosions of rail cars carrying oil have been in the news for several years. This would endanger the community of Benicia as well as others along the rail lines that are powerless to control rail traffic because of federal pre-emption. In addition to the local pollution, these trains would carry "extreme crude," from fracking and tar sands, which significantly impact climate change--we need to reverse, not accelerate, this process.

Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Subject: Reject Valero's dangerous oil trains project

RECEIVED
OCT 27 2015
CITY OF BENICIA
COMMUNITY DEVELOPMENT

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Lydia Aletraris

Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.

Subject: Reject Valero's dangerous oil trains project

Valero's outrageous proposal to build an oil trains terminal at its refinery in Benicia threatens the health and safety of people all along the rail route.

If approved by the Benicia City Council, the terminal would exacerbate local air pollution in Benicia and in communities along the rail route, expose those communities to the catastrophic danger of an oil train derailment and explosion, and fuel the climate crisis by encouraging fracking and tar sands extraction.

I urge the Planning Commission and the City Council to reject Valero's dangerous plan.
