Notes:

Hourly ozone measurements and related statistics are available at Vallejo-304 Tuolumne Street between 1976 and 2012. Some years in this range may not be represented. All concentrations expressed in parts per million.
 The national 1-hour ozone standard was revoked in June 2005 and is no longer in effect. Statistics related to the revoked standard are shown in [redacted] or [redacted].
 An exceedance of a standard is not necessarily related to a violation of the standard.
 Year Coverage indicates the extent to which available monitoring data represent the time of the year when concentrations are expected to be highest. 0 means that data represent none of the high period; 100 means that data represent the entire high period. A high Year Coverage does not mean that there was sufficient data for annual statistics to be considered valid.
 [redacted] means there was insufficient data available to determine the value.
