Subject: I support the Valero Crude by Rail project

Dear Ms. Million,

I am writing to express my support for the Revised Draft Environmental Report (RDEIR) and for Valero's proposed Crude by Rail project. The City of Benicia and independent experts have spent nearly three years closely examining this project and developing a comprehensive Draft Environmental Impact Report and RDEIR. These analyses go well beyond California Environmental Quality Act (CEQA) requirements and illustrate the project's many benefits for Benicia.

According to the City's DEIR, RDEIR and economic analysis, this project will:

- Meet or exceed all federal standards regarding rail procedure and safety, including the extensive additional regulations now in place at the federal and state levels since Valero initially applied for the project in 2012.
- Create 20 permanent, local, well-paying jobs and require an additional 120 skilled craftsman jobs during construction.
- Improve air quality and help California and the Bay Area achieve its climate goals by reducing greenhouse gas emissions by 225,000 metric tons per year.
- Operate under current air permits with the Bay Area Air Quality Management District (BAAQMD).
- Provide \$1.6 million in annual funding to the Office of Oil Spill Prevention and Response for inland spill preparedness.
- Provide an additional \$30,000 a month in property tax revenues to the City of Benicia to fund vital city services.

According to the DEIR and RDEIR, this project will NOT:

- Create additional health risks associated with project emissions.
- Increase the amount of crude that can be processed.
- Change the type of crude the refinery processes.
- Increase process emissions.
- Change refinery operations.

The reasons listed above are among the many reasons I continue to support Valero's Crude by Rail project. The Valero Benicia Refinery is a good neighbor to the community, a top employer and major benefactor to our region. It is also one of only two refineries in the state recognized by Cal/OSHA for its exemplary safety performance. Since 2006 the Benicia Refinery has continuously earned the VPP STAR Site designation for going above and beyond Cal/OSHA safety standards. Please consider the facts and approve this worthy project without further delay.

Sincerely,

Faye E Withers
479 Gallagher Dr

Subject: I support the Valero Crude by Rail project

Dear Ms. Million,

I am writing to express my support for the Revised Draft Environmental Report (RDEIR) and for Valero's proposed Crude by Rail project. The City of Benicia and independent experts have spent nearly three years closely examining this project and developing a comprehensive Draft Environmental Impact Report and RDEIR. These analyses go well beyond California Environmental Quality Act (CEQA) requirements and illustrate the project's many benefits for Benicia.

According to the City's DEIR, RDEIR and economic analysis, this project will:

- Meet or exceed all federal standards regarding rail procedure and safety, including the extensive additional regulations now in place at the federal and state levels since Valero initially applied for the project in 2012.
- Create 20 permanent, local, well-paying jobs and require an additional 120 skilled craftsman jobs during construction.
- Improve air quality and help California and the Bay Area achieve its climate goals by reducing greenhouse gas emissions by 225,000 metric tons per year.
- Operate under current air permits with the Bay Area Air Quality Management District (BAAQMD).
- Provide \$1.6 million in annual funding to the Office of Oil Spill Prevention and Response for inland spill preparedness.
- Provide an additional \$30,000 a month in property tax revenues to the City of Benicia to fund vital city services.

According to the DEIR and RDEIR, this project will NOT:

- Create additional health risks associated with project emissions.
- Increase the amount of crude that can be processed.
- Change the type of crude the refinery processes.
- Increase process emissions.
- Change refinery operations.

The reasons listed above are among the many reasons I continue to support Valero's Crude by Rail project. The Valero Benicia Refinery is a good neighbor to the community, a top employer and major benefactor to our region. It is also one of only two refineries in the state recognized by Cal/OSHA for its exemplary safety performance. Since 2006 the Benicia Refinery has continuously earned the VPP STAR Site designation for going above and beyond Cal/OSHA safety standards. Please consider the facts and approve this worthy project without further delay.

Sincerely,

Gordon Thielvoldt

- Increase process emissions.
- Change refinery operations.

The reasons listed above are among the many reasons I continue to support Valero's Crude by Rail project. The Valero Benicia Refinery is a good neighbor to the community, a top employer and major benefactor to our region. It is also one of only two refineries in the state recognized by Cal/OSHA for its exemplary safety performance. Since 2006 the Benicia Refinery has continuously earned the VPP STAR Site designation for going above and beyond Cal/OSHA safety standards. Please consider the facts and approve this worthy project without further delay.

Sincerely,

Patrick Hagan

Subject: I support the Valero Crude by Rail project

Dear Ms. Million,

I am writing to express my support for the Revised Draft Environmental Report (RDEIR) and for Valero's proposed Crude by Rail project. The City of Benicia and independent experts have spent nearly three years closely examining this project and developing a comprehensive Draft Environmental Impact Report and RDEIR. These analyses go well beyond California Environmental Quality Act (CEQA) requirements and illustrate the project's many benefits for Benicia.

According to the City's DEIR, RDEIR and economic analysis, this project will:

- Meet or exceed all federal standards regarding rail procedure and safety, including the extensive additional regulations now in place at the federal and state levels since Valero initially applied for the project in 2012.
- Create 20 permanent, local, well-paying jobs and require an additional 120 skilled craftsman jobs during construction.
- Improve air quality and help California and the Bay Area achieve its climate goals by reducing greenhouse gas emissions by 225,000 metric tons per year.
- Operate under current air permits with the Bay Area Air Quality Management District (BAAQMD).
- Provide \$1.6 million in annual funding to the Office of Oil Spill Prevention and Response for inland spill preparedness.
- Provide an additional \$30,000 a month in property tax revenues to the City of Benicia to fund vital city services.

According to the DEIR and RDEIR, this project will NOT:

- Create additional health risks associated with project emissions.
- Increase the amount of crude that can be processed.
- Change the type of crude the refinery processes.
- Increase process emissions.
- Change refinery operations.

The reasons listed above are among the many reasons I continue to support Valero's Crude by Rail project. The Valero Benicia Refinery is a good neighbor to the community, a top employer and major benefactor to our region. - Improve air quality and help California and the Bay Area achieve its climate goals by reducing greenhouse gas emissions by 225,000 metric tons per year.
- Operate under current air permits with the Bay Area Air Quality Management District (BAAQMD).
- Provide \$1.6 million in annual funding to the Office of Oil Spill Prevention and Response for inland spill preparedness.
- Provide an additional \$30,000 a month in property tax revenues to the City of Benicia to fund vital city services.

According to the DEIR and RDEIR, this project will NOT:

- Create additional health risks associated with project emissions.
- Increase the amount of crude that can be processed.
- Change the type of crude the refinery processes.
- Increase process emissions.
- Change refinery operations.

The reasons listed above are among the many reasons I continue to support Valero's Crude by Rail project. The Valero Benicia Refinery is a good neighbor to the community, a top employer and major benefactor to our region. It is also one of only two refineries in the state recognized by Cal/OSHA for its exemplary safety performance. Since 2006 the Benicia Refinery has continuously earned the VPP STAR Site designation for going above and beyond Cal/OSHA safety standards. Please consider the facts and approve this worthy project without further delay.

Sincerely,

Gary and Virginia Cady

Subject: I support the Valero Crude by Rail project

Dear Ms. Million,

I am writing to express my support for the Revised Draft Environmental Report (RDEIR) and for Valero's proposed Crude by Rail project. The City of Benicia and independent experts have spent nearly three years closely examining this project and developing a comprehensive Draft Environmental Impact Report and RDEIR. These analyses go well beyond California Environmental Quality Act (CEQA) requirements and illustrate the project's many benefits for Benicia.

According to the City's DEIR, RDEIR and economic analysis, this project will:

- Meet or exceed all federal standards regarding rail procedure and safety, including the extensive additional regulations now in place at the federal and state levels since Valero initially applied for the project in 2012.
- Create 20 permanent, local, well-paying jobs and require an additional 120 skilled craftsman jobs during construction.
- Improve air quality and help California and the Bay Area achieve its climate goals by reducing greenhouse gas emissions by 225,000 metric tons per year.
- Operate under current air permits with the Bay Area Air Quality Management District (BAAQMD).
- Provide \$1.6 million in annual funding to the Office of Oil Spill Prevention and Response for inland spill preparedness.

These analyses go well beyond California Environmental Quality Act (CEQA) requirements and illustrate the project's many benefits for Benicia.

According to the City's DEIR, RDEIR and economic analysis, this project will:

- Meet or exceed all federal standards regarding rail procedure and safety, including the extensive additional regulations now in place at the federal and state levels since Valero initially applied for the project in 2012.
- Create 20 permanent, local, well-paying jobs and require an additional 120 skilled craftsman jobs during construction.
- Improve air quality and help California and the Bay Area achieve its climate goals by reducing greenhouse gas emissions by 225,000 metric tons per year.
- Operate under current air permits with the Bay Area Air Quality Management District (BAAQMD).
- Provide \$1.6 million in annual funding to the Office of Oil Spill Prevention and Response for inland spill preparedness.
- Provide an additional \$30,000 a month in property tax revenues to the City of Benicia to fund vital city services.

According to the DEIR and RDEIR, this project will NOT:

- Create additional health risks associated with project emissions.
- Increase the amount of crude that can be processed.
- Change the type of crude the refinery processes.
- Increase process emissions.
- Change refinery operations.

The reasons listed above are among the many reasons I continue to support Valero's Crude by Rail project. The Valero Benicia Refinery is a good neighbor to the community, a top employer and major benefactor to our region. It is also one of only two refineries in the state recognized by Cal/OSHA for its exemplary safety performance. Since 2006 the Benicia Refinery has continuously earned the VPP STAR Site designation for going above and beyond Cal/OSHA safety standards. Please consider the facts and approve this worthy project without further delay.

Sincerely,

Pierre Bidou

Subject: I support the Valero Crude by Rail project

Dear Ms. Million,

I am writing to express my support for the Revised Draft Environmental Report (RDEIR) and for Valero's proposed Crude by Rail project. The City of Benicia and independent experts have spent nearly three years closely examining this project and developing a comprehensive Draft Environmental Impact Report and RDEIR. These analyses go well beyond California Environmental Quality Act (CEQA) requirements and illustrate the project's many benefits for Benicia.

According to the City's DEIR, RDEIR and economic analysis, this project will:

- Meet or exceed all federal standards regarding rail procedure and safety, including the extensive additional regulations now in place at the federal and state levels since Valero initially applied for the project in 2012.

Subject: I support the Valero Crude by Rail project

Dear Ms. Million,

I am writing to express my support for the Revised Draft Environmental Report (RDEIR) and for Valero's proposed Crude by Rail project. The City of Benicia and independent experts have spent nearly three years closely examining this project and developing a comprehensive Draft Environmental Impact Report and RDEIR. These analyses go well beyond California Environmental Quality Act (CEQA) requirements and illustrate the project's many benefits for Benicia.

According to the City's DEIR, RDEIR and economic analysis, this project will:

- Meet or exceed all federal standards regarding rail procedure and safety, including the extensive additional regulations now in place at the federal and state levels since Valero initially applied for the project in 2012.
- Create 20 permanent, local, well-paying jobs and require an additional 120 skilled craftsman jobs during construction.
- Improve air quality and help California and the Bay Area achieve its climate goals by reducing greenhouse gas emissions by 225,000 metric tons per year.
- Operate under current air permits with the Bay Area Air Quality Management District (BAAQMD).
- Provide \$1.6 million in annual funding to the Office of Oil Spill Prevention and Response for inland spill preparedness.
- Provide an additional \$30,000 a month in property tax revenues to the City of Benicia to fund vital city services.

According to the DEIR and RDEIR, this project will NOT:

- Create additional health risks associated with project emissions.
- Increase the amount of crude that can be processed.
- Change the type of crude the refinery processes.
- Increase process emissions.
- Change refinery operations.

The reasons listed above are among the many reasons I continue to support Valero's Crude by Rail project. The Valero Benicia Refinery is a good neighbor to the community, a top employer and major benefactor to our region. It is also one of only two refineries in the state recognized by Cal/OSHA for its exemplary safety performance. Since 2006 the Benicia Refinery has continuously earned the VPP STAR Site designation for going above and beyond Cal/OSHA safety standards. Please consider the facts and approve this worthy project without further delay.

Sincerely,

Joshua Cross

- Change refinery operations.

The reasons listed above are among the many reasons I continue to support Valero's Crude by Rail project. The Valero Benicia Refinery is a good neighbor to the community, a top employer and major benefactor to our region. It is also one of only two refineries in the state recognized by Cal/OSHA for its exemplary safety performance. Since 2006 the Benicia Refinery has continuously earned the VPP STAR Site designation for going above and beyond Cal/OSHA safety standards. Please consider the facts and approve this worthy project without further delay.

Sincerely,

Michael Petrellese

Subject: I support the Valero Crude by Rail project

Dear Ms. Million,

I am writing to express my support for the Revised Draft Environmental Report (RDEIR) and for Valero's proposed Crude by Rail project. The City of Benicia and independent experts have spent nearly three years closely examining this project and developing a comprehensive Draft Environmental Impact Report and RDEIR. These analyses go well beyond California Environmental Quality Act (CEQA) requirements and illustrate the project's many benefits for Benicia.

According to the City's DEIR, RDEIR and economic analysis, this project will:

- Meet or exceed all federal standards regarding rail procedure and safety, including the extensive additional regulations now in place at the federal and state levels since Valero initially applied for the project in 2012.
- Create 20 permanent, local, well-paying jobs and require an additional 120 skilled craftsman jobs during construction.
- Improve air quality and help California and the Bay Area achieve its climate goals by reducing greenhouse gas emissions by 225,000 metric tons per year.
- Operate under current air permits with the Bay Area Air Quality Management District (BAAQMD).
- Provide \$1.6 million in annual funding to the Office of Oil Spill Prevention and Response for inland spill preparedness.
- Provide an additional \$30,000 a month in property tax revenues to the City of Benicia to fund vital city services.

According to the DEIR and RDEIR, this project will NOT:

- Create additional health risks associated with project emissions.
- Increase the amount of crude that can be processed.
- Change the type of crude the refinery processes.
- Increase process emissions.
- Change refinery operations.

The reasons listed above are among the many reasons I continue to support Valero's Crude by Rail project. The Valero Benicia Refinery is a good neighbor to the community, a top employer and major benefactor to our region. - Operate under current air permits with the Bay Area Air Quality Management District (BAAQMD).
- Provide \$1.6 million in annual funding to the Office of Oil Spill Prevention and Response for inland spill preparedness.
- Provide an additional \$30,000 a month in property tax revenues to the City of Benicia to fund vital city services.

According to the DEIR and RDEIR, this project will NOT:

- Create additional health risks associated with project emissions.
- Increase the amount of crude that can be processed.
- Change the type of crude the refinery processes.
- Increase process emissions.
- Change refinery operations.

The reasons listed above are among the many reasons I continue to support Valero's Crude by Rail project. The Valero Benicia Refinery is a good neighbor to the community, a top employer and major benefactor to our region. It is also one of only two refineries in the state recognized by Cal/OSHA for its exemplary safety performance. Since 2006 the Benicia Refinery has continuously earned the VPP STAR Site designation for going above and beyond Cal/OSHA safety standards. Please consider the facts and approve this worthy project without further delay.

Sincerely,

Adam Van Name

Subject: I support the Valero Crude by Rail project

Dear Ms. Million,

I am writing to express my support for the Revised Draft Environmental Report (RDEIR) and for Valero's proposed Crude by Rail project. The City of Benicia and independent experts have spent nearly three years closely examining this project and developing a comprehensive Draft Environmental Impact Report and RDEIR. These analyses go well beyond California Environmental Quality Act (CEQA) requirements and illustrate the project's many benefits for Benicia.

According to the City's DEIR, RDEIR and economic analysis, this project will:

- Meet or exceed all federal standards regarding rail procedure and safety, including the extensive additional regulations now in place at the federal and state levels since Valero initially applied for the project in 2012.
- Create 20 permanent, local, well-paying jobs and require an additional 120 skilled craftsman jobs during construction.
- Improve air quality and help California and the Bay Area achieve its climate goals by reducing greenhouse gas emissions by 225,000 metric tons per year.
- Operate under current air permits with the Bay Area Air Quality Management District (BAAQMD).
- Provide \$1.6 million in annual funding to the Office of Oil Spill Prevention and Response for inland spill preparedness.
- Provide an additional \$30,000 a month in property tax revenues to the City of Benicia to fund vital city services.

According to the DEIR and RDEIR, this project will NOT:

These analyses go well beyond California Environmental Quality Act (CEQA) requirements and illustrate the project's many benefits for Benicia.

According to the City's DEIR, RDEIR and economic analysis, this project will:

- Meet or exceed all federal standards regarding rail procedure and safety, including the extensive additional regulations now in place at the federal and state levels since Valero initially applied for the project in 2012.
- Create 20 permanent, local, well-paying jobs and require an additional 120 skilled craftsman jobs during construction.
- Improve air quality and help California and the Bay Area achieve its climate goals by reducing greenhouse gas emissions by 225,000 metric tons per year.
- Operate under current air permits with the Bay Area Air Quality Management District (BAAQMD).
- Provide \$1.6 million in annual funding to the Office of Oil Spill Prevention and Response for inland spill preparedness.
- Provide an additional \$30,000 a month in property tax revenues to the City of Benicia to fund vital city services.

According the DEIR and RDEIR, this project will NOT:

- Create additional health risks associated with project emissions.
- Increase the amount of crude that can be processed.
- Change the type of crude the refinery processes.
- Increase process emissions.
- Change refinery operations.

The reasons listed above are among the many reasons I continue to support Valero's Crude by Rail project. The Valero Benicia Refinery is a good neighbor to the community, a top employer and major benefactor to our region. It is also one of only two refineries in the state recognized by Cal/OSHA for its exemplary safety performance. Since 2006 the Benicia Refinery has continuously earned the VPP STAR Site designation for going above and beyond Cal/OSHA safety standards. Please consider the facts and approve this worthy project without further delay.

Sincerely,

Chris Simmons

Subject: I support the Valero Crude by Rail project

Dear Ms. Million,

I am writing to express my support for the Revised Draft Environmental Report (RDEIR) and for Valero's proposed Crude by Rail project. The City of Benicia and independent experts have spent nearly three years closely examining this project and developing a comprehensive Draft Environmental Impact Report and RDEIR. These analyses go well beyond California Environmental Quality Act (CEQA) requirements and illustrate the project's many benefits for Benicia.

According to the City's DEIR, RDEIR and economic analysis, this project will:

- Meet or exceed all federal standards regarding rail procedure and safety, including the extensive additional regulations now in place at the federal and state levels since Valero initially applied for the project in 2012.

Subject: I support the Valero Crude by Rail project

Dear Ms. Million,

I am writing to express my support for the Revised Draft Environmental Report (RDEIR) and for Valero's proposed Crude by Rail project. The City of Benicia and independent experts have spent nearly three years closely examining this project and developing a comprehensive Draft Environmental Impact Report and RDEIR. These analyses go well beyond California Environmental Quality Act (CEQA) requirements and illustrate the project's many benefits for Benicia.

According to the City's DEIR, RDEIR and economic analysis, this project will:

- Meet or exceed all federal standards regarding rail procedure and safety, including the extensive additional regulations now in place at the federal and state levels since Valero initially applied for the project in 2012.
- Create 20 permanent, local, well-paying jobs and require an additional 120 skilled craftsman jobs during construction.
- Improve air quality and help California and the Bay Area achieve its climate goals by reducing greenhouse gas emissions by 225,000 metric tons per year.
- Operate under current air permits with the Bay Area Air Quality Management District (BAAQMD).
- Provide \$1.6 million in annual funding to the Office of Oil Spill Prevention and Response for inland spill preparedness.
- Provide an additional \$30,000 a month in property tax revenues to the City of Benicia to fund vital city services.

According the DEIR and RDEIR, this project will NOT:

- Create additional health risks associated with project emissions.
- Increase the amount of crude that can be processed.
- Change the type of crude the refinery processes.
- Increase process emissions.
- Change refinery operations.

The reasons listed above are among the many reasons I continue to support Valero's Crude by Rail project. The Valero Benicia Refinery is a good neighbor to the community, a top employer and major benefactor to our region. It is also one of only two refineries in the state recognized by Cal/OSHA for its exemplary safety performance. Since 2006 the Benicia Refinery has continuously earned the VPP STAR Site designation for going above and beyond Cal/OSHA safety standards. Please consider the facts and approve this worthy project without further delay.

Sincerely,

Jeff Sutton
