NOTIFICATION OF INCIDENT

***INFORMATION ONLY – NON-EMERGENCY**

At approximately 12:25 AM today, January 22, 2022, the Valero Benicia Refinery identified a leak during the offloading process of a propane railcar. The source of the propane leak was identified and quickly isolated, and control measures were put in place while crews stopped the leak. The Benicia Fire Department was notified and responded to the refinery and also deployed portable air monitors into the community downwind from the incident to determine any offsite impact. The department could not detect any hazard and continued to monitor the area even after the incident was stabilized. Fire personnel will continue to monitor the situation and update the public if conditions change.
